Artificial Intelligence & War
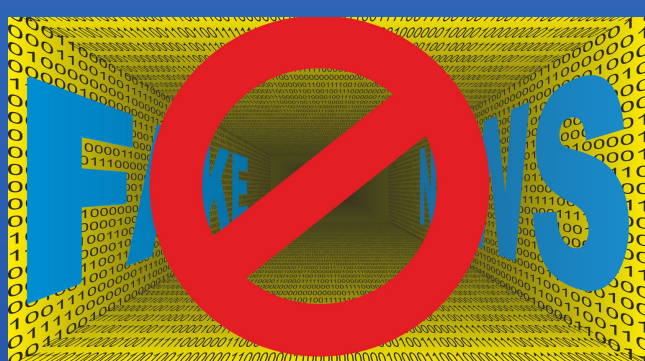

Roles of Artificial Intelligence on the Battlefield

Tech-Savvy Soldiers

AI-based training provides realistic scenarios, perfecting the warfighter's skills in a controlled and immersive environment.

Generative AI & Disinformation

AI-generated disinformation is used to solicit support or give the impression of broader support for a particular side. Adversaries create AI-generated images of fake victims.

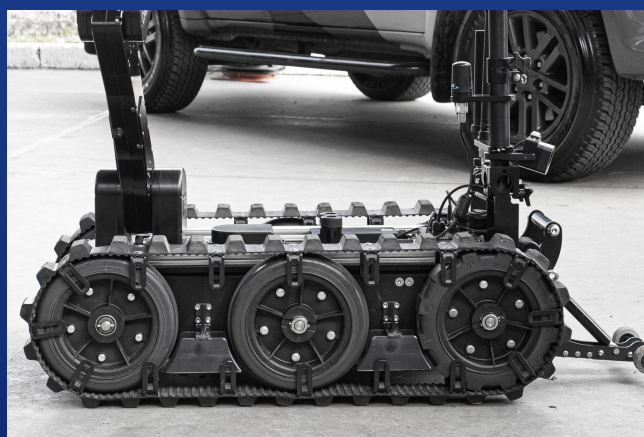

Autonomous Weapons Systems

AI-equipped Drones and Unmanned Aerial Vehicles are used for logistical support, reconnaissance, surveillance, and combat operations.

Robotics & Ground Operations

AI-driven robots are used in ground operations, bomb disposal, reconnaissance, and logistics.

Data Analysis & Strategic Decision Support

AI systems process and interpret vast amounts of data to provide actionable insights.
